PASSWORDS

and how to secure yours

Sometimes the greatest password you can come up with is the easiest one to find out. When you choose a password that is strong unlike 123456789 you should incorporate numbers, letters, and symbols but do not forget to use upper and lower case numbers such as C001c@t21 that would translate to coolcat 21: this is an example of a secure password. The worst thing you can do is use a password generator, these are the worst kinds of ways to find a password because the password has to be set in the system this proves someone knows your password. Quoting Jodi Bell “At the end of the day, the goals are simple: safety and security”.
